

56. (New) The procedure of claim 55, wherein prior to and during injection into the cavity, the bolus of precursor composition is separated from any blood that may have refluxed into the distal end of the cathether by a plug of barrier solvent suitable for such separation.

57. (New) The procedure of claim 56, wherein the barrier solvent is a 20-30% aqueous ethanol solution.

58. (New) The procedure of claim 54, wherein the cavity is first filled with a mechanical occlusive device prior to introducing the precursor composition.

59. (New) A kit for at least partially filling an anatomical cavity comprising the following parts:

- a) the precursor composition of claim 32; and
- b) one or more suitable catheters for delivery of the precursor composition into the anatomical cavity.

60. (New) The kit of claim 61, further comprising a mechanical occlusive device.

---

REMARKS

Claims 1-31 are present in the above-referenced application. New claims 32-60 are supported by the specification. Accordingly, no new matter has been added.

In view of the foregoing amendments, the new claims are now in better condition for examination and allowance.

Respectfully submitted,

*Kristin H. Neuman*
